SUSTAINABLE FUTURE LEADERSHIP

The Sustainable Future Leadership Summer School, hosted by Brunel Business School, offers a unique opportunity to develop knowledge surrounding sustainability, AI leadership, regulation, and managing innovation.

Through the guidance of distinguished academics in the Business School and beyond - including Law, Professional Development Centre, and Social Science, as well as hearing from industry leaders and entrepreneurial mentors, this programme brings together participants from around the globe to address pressing challenges that are faced by business organisations to future proof their operation.

Brunel Business School is a member of the West London Business Community with a track record of delivering entrepreneurial education to executives, helping them to develop a growth mentality to thrive in the time of challenging regulation. In this programme, you will explore transformative themes, such as harnessing the power of AI, making ethical decisions, and advancing the United Nations' Sustainable Development Goals (SDGs), while developing key professional skills to lead and communicate change.

- Learn to lead and collaborate with peers from diverse cultural backgrounds to address business challenges, developing individual leadership and employability skills;
- Develop understanding on the principles of UN-SDGs and AI, and its implication of multi-industries, large, and small businesses;
- Develop professional skills that help you to adapt and thrive in the professional world.

Immerse yourself in the energy of London through cultural activities and industry visits, gaining first-hand insights into how innovative businesses address pressing challenges and engage with industry experts to broaden your global perspective to influence your future career!

ROBOTICS & ENGINEERING

Follow in the footsteps of one of Britain's most creative designers and engineers, Isambard Kingdom Brunel, and join us for a specialised and unique programme in Robotics and Engineering. This programme is aimed at students across the globe who are looking for an immersive experience.

Regardless of discipline, engineers work increasingly in multi-disciplinary teams. Robotics, control systems, and electro-mechanical systems - commonly grouped as mechatronics - is one such area which covers mechanics, electronics, and computing, which are all disciplines at the heart of our engineering provision. Taking part will allow you to meet and work with students from different backgrounds to make your own multi-disciplinary experience. Our robotics summer school is comprised of academic training,

central group project work, interesting lectures on robotics and engineering topics, combined with cultural immersion activities and industrial tours in London, which are guaranteed to enhance the international experience!
