

Summer School 2025

ONE HEALTH, GENETICS & SUSTAINABILITY

From July 7th to July 25th, 2025

3 weeks

1 project

**6 ECTS
credits**

ONE HEALTH AND BIOTECHNOLOGY:

Translating Science into Action

During this summer school, you will have the opportunity to dive into the fascinating field of One Health, a transdisciplinary approach to sustainability.

From scientific research to environmental studies and ethical considerations, One Health integrates human and environmental health within a single framework through comprehensive analysis and systems thinking.

To understand the underlying relationships within this new multifaceted paradigm and to illustrate how it is explored, we offer a wide range of courses and practical training. This will provide you some of the fundamental knowledge and the know-how to approach questions related to One health from the biological and biotechnological perspective.

AIMS

- Develop systems thinking capabilities for One Health and beyond
- Acquire skills required to bridge scientific approaches and One Health problematics
- Develop skills in evaluation of environmental impacts on human health in the lab using cellular models
- Acquire knowledge and technical skills for metagenomics and evaluation of environmental microbial biodiversity

Program fees: €3 200

All-inclusive : courses, housing, breakfast and lunch on weekdays, French Language courses, all cultural activities & trips, a farewell party, a 3-week Paris transport pass and more!

Application deadline: May 30th, 2025
